

AGA

Arctic Grade Additive

Thread **On**

Description:

AGA is a liquid additive that can be stirred into any oil base thread compound to instantly turn it into arctic grade. This allows users to stock only standard grade thread compounds instead of expensive arctic grade compounds. Compounds can be converted to arctic grade as needed.

One quart treats 2 gallons of compound. Use 2 quarts in 5-gallon containers and 3 quarts if weather is severely cold. (Less than -10^oF working conditions is considered severe.)

- * **Easy to use**
- * **Convenient**
- * **Use summer stock in winter months**

Packaging Information:
